

Nonstructural Damage

Team Member: Glen Granholm, ETC Building & Design, Inc.

Questions for South Napa Earthquake Field Team

Glen:

1. Please broadly summarize what you saw today in the field. What conclusions can you draw from what you've seen?
[Nonstructural damage stopping operations \(airport, retail stores, shipping and receiving\).](#)
2. What in this area should investigators study tomorrow? Are there obstacles that we need to overcome (i.e. access) to study this area or topic tomorrow?
[Access issues for all: Target structural, USPS structural / nonstructural pipes, and Ross interior.](#)
3. What future research needs do you see from this area? What comprehensive studies would be helpful? What data would be useful for these studies?
[Napa College anchoring worked. Non-anchorage failed. This earthquake demonstrated mitigation is effective.](#)
4. Have you seen items in other areas or disciplines that need further study or investigation new or as a longer term topic?
[The USPS building appears to have multiple systems / structural failure types.](#)
